

## SOLUTIONS TO KEEP YOUR BUSINESS RUNNING

In the world of technology, threats are everywhere. When these threats come knocking at your door, do you have a plan? If your systems were compromised and the information of employees and clients were at risk, what would you do? Warren Averett Technology Group can provide you the tools you need to not only remedy problems when they occur, but take preventative action to identify problems before they turn into a crisis. Our team understands the threats facing the integrity of your information and we offer solutions that fit the needs of your organization.

### BREACH RESPONSE SERVICES

#### Breach Forensics

If you believe your systems were breached, you would most likely have a lot of questions. Did a breach actually occur? If so, how broad was the breach? What was compromised? What was the financial impact? How did it happen? Will it happen again? Breach forensics is all about answering your questions. We can help with the lingering anxiety that follows a breach and ensure that the attack is no longer ongoing. Signs like malware and unauthorized user accounts may be indications that a breach is ongoing. Our experienced IT professionals can delve deep into your systems and determine what has taken place and to what extent. They can answer any inquiry you have about the health of your IT systems after a breach.

#### Breach Remediation

After a breach, an essential part of any response should be remediation. During breach remediation, our team goes through a thorough process of both remediating the current breach and developing a plan to mitigate the risk of another breach. After the breach is remediated, our experts can help you develop a plan to strengthen your systems against future cyberattacks. These services can help give you peace of mind that your business or organization is in a safer position regarding being compromised in the future.

### CONSULTING SERVICES

#### Network Security

Not sure what security measures you need to take to keep your sensitive information secure? IT systems today must respond to a rapidly changing threat environment, and we can help you stay ahead of the curve. Our professionals at Warren Averett Technology Group have the experience you need to be able to effectively assess and respond to your network security needs. We have years of experience in advising businesses and organizations on methods to keep sensitive data secure.

#### Network Infrastructure

Is the underlying structure of your network running efficiently and free of vulnerabilities? Our team

*(continued)*

has the resources to thoroughly examine your networks to identify possible inefficiencies and risks for data breaches. Whatever your system, Warren Averett Technology Group can help to ensure that it is running optimally. Our network infrastructure services include, but are not limited to:

- **Data Recovery:** Whether you've lost a single spreadsheet or an entire server, we provide services to both react to data loss after it happens and implement safeguards against future losses. Our data recovery services include a failover site and backup capabilities to protect you from downtime and data loss in the event of a technical or natural disaster. Our fully integrated solutions combine remote disaster recovery, local backup and application failover into a flexible, managed service.
- **Hosted Cloud Services:** Our hosted cloud services can help your business or organization move away from traditional IT systems with their monotonous and repetitive daily maintenance and into a more agile and efficient cloud system. With less time spent on upkeep, your staff will have more time to create value for your business.

### PREVENTING THREATS

The IT security field is constantly evolving, and it is important that you stay ahead of the game. In whatever form threats present themselves, Warren Averett Technology Group can help your company stay agile and responsive to cyber threats. Every day, businesses and organizations around the world are bombarded with ever-evolving variations of phishing, malware, DDoS attacks and more. Our experienced team can help you take action to help prevent breaches before they ever occur, saving your business or organization valuable time and resources.
