

SYSTEM INFRASTRUCTURE

TECHNOLOGY SOLUTIONS FOR YOUR BUSINESS

Businesses today are faced with a variety of connectivity challenges—from ensuring data is secured, to providing an efficient work environment and everything in between. This is where Warren Averett Technology Group comes in. We can handle all your technology needs so you can focus on growing your business.

NETWORK SOLUTIONS

Whether you have one location or multiple sites, you know it's imperative that your technical infrastructure communicates effectively. When that doesn't happen, your bottom line is affected. Our engineers can evaluate your current network and make recommendations on how your business could operate more efficiently. Warren Averett Technology Group can help you maximize your productivity, minimize your technology effort and expense, and meet compliance regulations through proven, reliable network infrastructure solutions.

CLOUD SOLUTIONS

Our hosted cloud solutions can help you secure your data, minimize your risk, meet industry compliance and provide disaster recovery. With traditional on-site IT systems, you are forced to allocate your valuable IT resources to the repetitive daily tasks of maintaining legacy infrastructure and applications. Moving to the cloud frees your IT staff from mundane day-to-day tasks, giving them more time to create value for your business. Application support and private cloud

provisioning are key components of our managed cloud solutions.

Warren Averett Technology Group hosts fully-managed cloud services with a highly-available, highly-secure framework of storage, server and networking resources. We can protect your applications with extensive filtering capabilities, including web content, email encryption, spam filtering and antivirus/malware/spyware protection.

Companies that invest in big data, cloud and mobility strategies have
53% MORE GROWTH
than businesses who don't.

ON-PREMISE AND HYBRID SOLUTIONS

Depending on the way your business operates, your needs may be different than the company across the street. Our professionals understand that every business is unique and has unique needs, including technology delivery. We can help identify the infrastructure that best fits your company to ensure it runs as efficiently as possible, including cloud, on-premise and hybrid solutions.

INTERNET CONNECTIVITY AND VOIP

Internet connectivity can be a costly expense, and if you don't have the speed you need, your business could be losing valuable time and money. Warren Averett Technology Group can provide your company an internet solution with faster speeds at a more affordable price.

Is your business currently operating with outdated computers and phones? Updating these systems for all employees can be very costly and tedious. Warren Averett Technology Group can handle all of this for you. From putting a phone on a desk to upgrading and servicing computers—mark it off your to-do list and leave it to us.

DATA RECOVERY SOLUTIONS

What would happen if you woke up tomorrow to find all your data—client contacts, purchase orders, historical documentation and accounting information—completely gone? Would your business still be able to operate? Would you be able to contact your customers and view past records? We understand the importance of securing your data. We know what needs to be accomplished and what can happen if it's not.

Every data loss doesn't have to become a disaster. Our data recovery services can help protect you from downtime and data loss in the event of a technical or natural disaster. We offer a range of data recovery solutions to best meet your needs. Preparing for component failure or system outage not only protects your revenue, but also helps ensure ongoing employee productivity and customer satisfaction.
